PROFILE

In response to market changes, I have developed a wide range of DeFi products to meet various company needs. Notably, I contributed to a service that reached over $50 million in TVL and attracted more than 10,000 active users, leading improvements across both features and system reliability. From web and mobile app development to smart contract engineering and off-chain infrastructure, I've gained end-to-end experience in Web3 development. I take pride in adapting flexibly to company demands and growing alongside the organization.

WORK EXPERIENCE

2022 - 2023
Neutra Finance
Web3 Engnineer
- Developed and maintained the frontend for a Delta Neutral DeFi service
- Participated in testing and development of delta neutral strategy smart contracts
- Collaborated with RoboLabs to conduct strategy backtesting using influxDB and Grafana
- Indexed strategy data using The Graph (Subgraph) and built data visualizations

2022.03 - 2022.07
Nex Finance
Frontend Engnineer
- Developed and maintained the frontend for an on-chain futures trading platform
- Optimized and reduced web bundle size by over 30%
- Implemented a public RPC auto-handler to prevent RPC-related errors

2020 - 2021
Kronos Dao & Kairos Cash
Frontend Engnineer
- Developed and maintained frontend for DeFi 2.0 services
- Integrated WalletConnect, MetaMask, Kaikas, and supported multi-network wallet connections
- Deployed a Multicall contract on the Klaytn network, reducing smart contract call frequency by 50%

SKILLS

WEB3
- Solidity
- Hardhat
- TheGraph
- Backtest DeFi strategies

FRONTEND
- React.js
- Next.js

BACKEND
- Nest.js
- AWS Serverless Framework
- AWS DynamoDB
- GraphQL
- PostgreSQL

EDUCATION

2016 - 2024
MYOUNGJI UNIVERSITY
- Bachelor of Computer Engineering

REFERENCE

Narumi
Rise Chain / Blockchain Engineer

LANGUAGES

- Korean (native)
- English (basic)
